

ORCHESTRATION & ORCHESTRATION TOOLS

*BY
MADUMATHI*

Orchestration Overview

- Orchestration is the automated configuration, management, and coordination of computer systems, applications, and services.
- The need to combine multiple automated tasks and their configurations across groups of systems or machines increases. That's where orchestration can help.
- IT orchestration also helps you to streamline and optimize frequently occurring processes and workflows, which can support a DevOps approach and help your team deploy applications more quickly.

Orchestration vs Automation

- Orchestration and Automation are different, but related concepts.
- In general, automation refers to automating a single task. This is different from orchestration, which is how you can automate a process or workflow that involves many steps across multiple disparate systems.
- When you start by building automation into your processes, you can then orchestrate them to run automatically.

Benefits of Orchestration

Orchestration offers multiple benefits such as

- **Centralized management:** Orchestration enables IT teams to automate tasks across multiple platforms from a single point, which provides centralized monitoring and management over all IT servers, applications, and workflows.
- **Fast and easy integrations:** Centralized coordination among IT servers and applications enables easier and faster integration of new tools and systems to the existing infrastructure.
- **Reduced product-release cycles:** Coordinating IT workflows such as DevOps and automation_testing enables faster time to release new products and applications

Where is orchestration used?

- Unified IT workflow automation
- Devops Orchestration
- Cloud Orchestration

Top 6 Reasons To Invest In DevOps Orchestration

1 Accelerate your automation process

2 Improve cross-team collaboration

3 Ensure higher release quality

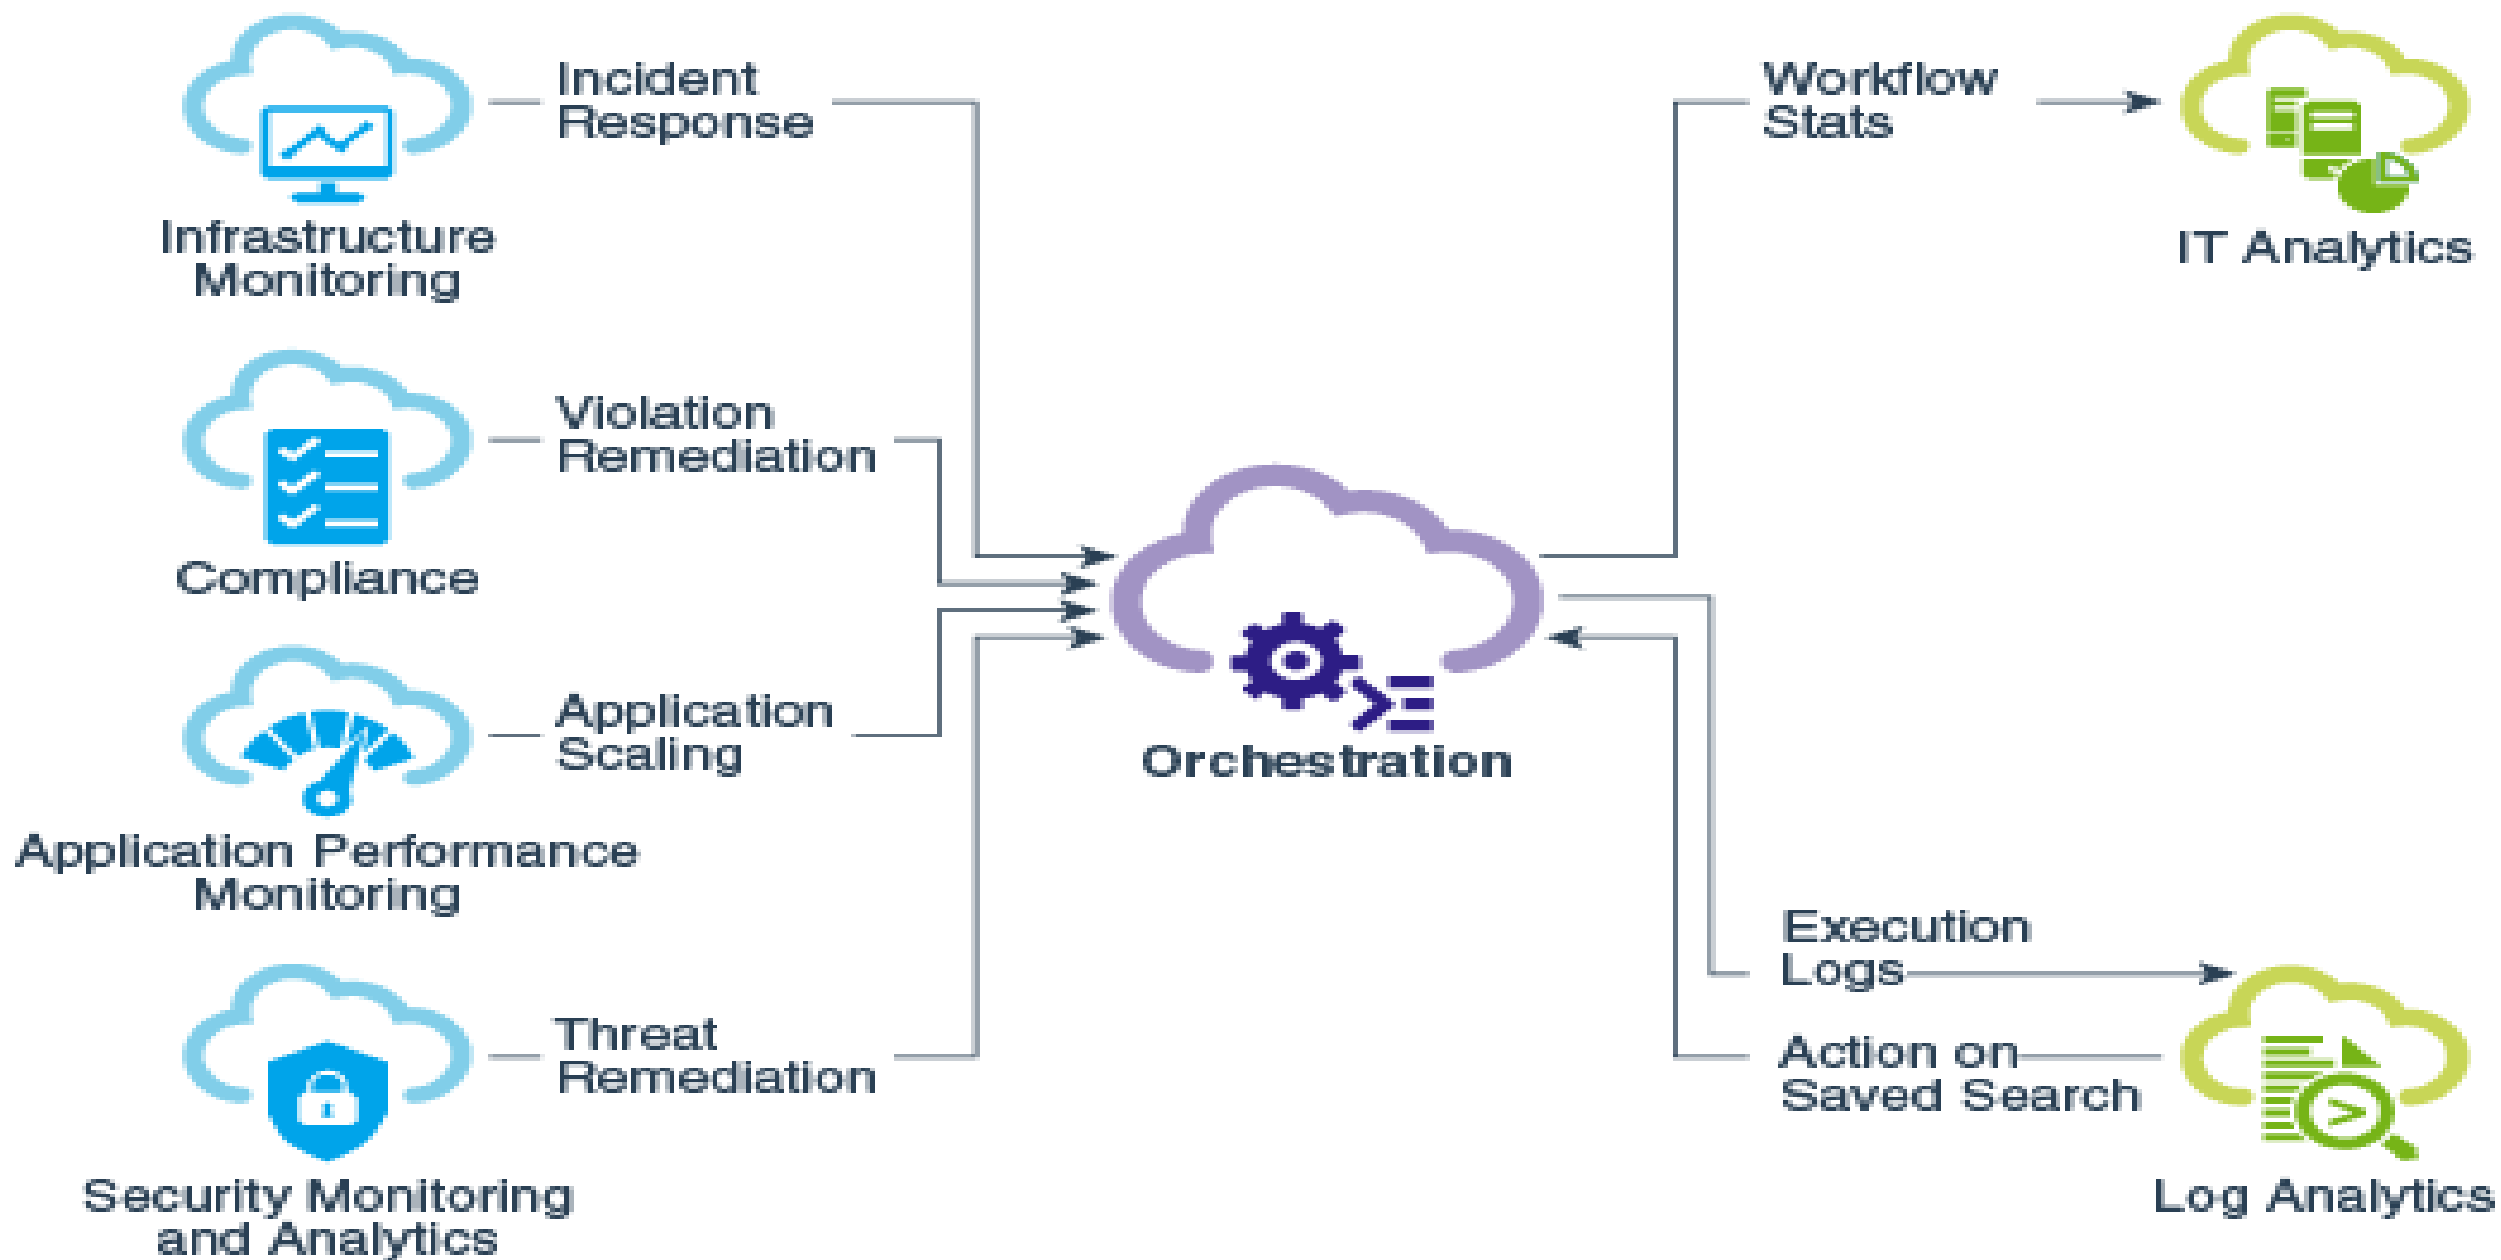

4 Reduce costs for IT infrastructure and human resources

5 Build transparency across the SDLC

6 Boost the velocity of releases

Best Orchestration tools in Devops

Here's the list of the best DevOps orchestration tools.

- 1.Kubernetes
- 2.Dynatrace
- 3.Ansible
- 4.Azure Kubernetes Services (AKS)
- 5.Amazon Elastic Kubernetes Service (AWS EKS)
- 6.RedHat OpenShift
- 7.Rancher
- 8.Docker Swarm
- 9.MiniKube
- 10.Nomad
